Prism is a PowerShell module manager inspired by NuGet. Run prism install in a source code repository, and Prism will save private modules into a "PSModules" directory in that repository. Prism let's you:

- Package and deploy modules side-by-side with the app or tool that uses them without needing to install modules globally ahead of time.
- Not worry about what modules are or aren't installed. Scripts can import and use modules from the "PSModules" directory in the script's source code repository.
- Avoid committing modules to the source code repository. Team members and build processes run prism install

to get modules installed.

[Bicep | 2.3.0](#)

Published: 06/28/2022 20:28:56 by Stefan Ivemo

A module to run Bicep using PowerShell. The module is a community project built using the Bicep assemblies to provide you with an enhanced Bicep experience directly from PowerShell without having Bicep CLI installed.

The module also provides the additional features:

- Generate ARM template parameter files directly from a Bicep file
- Quickly open the API reference docs by referencing the Bicep types
- Get the result from a build as a string or hashtable instead of writing to a file
- Test if a Bicep file is valid without building it
- Convert JSON objects to Bicep Language
- Install/Update/Uninstall Bicep CLI
- Specify output folder when building* and decompiling Bicep/ARM templates
- Specify output filename when building Bicep files
- Find modules in private module registries
- Clear local module cache

For more information about Bicep, please visit the official Bicep GitHub Repository: <https://github.com/Azure/bicep>
