SimplySql | 1.9.0

Published: 05/28/2022 16:39:27 by Mithrandyr

Querying SQL (SQL Server, Oracle, PostgreSql, SQLite, & mySql) the PowerShell way: simple commands... powerful opportunities.

SimplySql is a module that provides an intuitive set of cmdlets for talking to databases that abstracts the vendor specifics, allowing you to focus on getting work done. The basic pattern is to connect to a database, execute one or more sql statements and then close your database connection. This module provides cmdlets that map to this basic pattern. Each provider has its own Open-*Connection cmdlet -> Open-SqlConnection, Open-SQLiteConnection, Open-OracleConnection, Open-PostGreConnection, Open-MySqlConnection. The rest of the commands are provider agnostic.

Open/Close/Show/Test/Set/Get -SqlConnection >> Control as many active connections as you want. Invoke-SqlScalar/SqlQuery/SqlUpdate >> Interact with those connections. Get/Clear -SqlMessage >> Get Informational messages, if provider supports it. Invoke-SqlBulkCopy >> Bulk Dataload from one connection to another. Start/Complete/Undo/Get -SqlTransaction >> Utilize transactions!

A module to run Bicep using PowerShell. The module is a community project built using the Bicep assemblies to provide you with an enhanced Bicep experience directly from PowerShell without having Bicep CLI installed. The module also provides the additional features:

• Generate ARM template parameter files directly from a Bicep file
• Quickly open the API reference docs by referencing the Bicep types
• Get the result from a build as a string or hashtable instead of writing to a file
• Test if a Bicep file is valid without building it
• Convert JSON objects to Bicep Language
• Install/Update/Uninstall Bicep CLI
• Specify output folder when building* and decompiling Bicep/ARM templates
• Specify output filename when building Bicep files
• Find modules in private module registries
• Clear local module cache
